

## SEEA Supply-Use tables workshop

Take a look at the standard tables below for physical supply and use of water. In groups, choose two cells from each table, not from water supply, sewerage or agricultural industries, and tell the story of:

1. Why the cell is important in the Philippines.
2. How and why is the water supplied or used?
3. Does this occur at a local, regional or national scale?
4. What data do you know of that could inform this cell? If none, how would you collect this and other data like it?

Refer to the ISIC classification below to choose the appropriate cells. Notice that some ISIC groups are co-presented in these tables. In the case of the Philippines, do you see a reason to change this presentation? Any industries that are grouped that should be presented individually?

		Industries (by ISIC category)						Households	Rest of the world	Total
		1-3	5-33, 41-43	35	36	37	38, 39, 45-99			
<b>A. Physical use table (physical units)</b>										
From the environment	<b>1. Total abstraction</b> (= 1.a + 1.b = 1.i + 1.ii)									
	1.a. Abstraction for own use									
	1.b. Abstraction for distribution									
	1.i. From inland water resources:									
	1.i.1. Surface water									
	1.i.2. Groundwater									
	1.i.3. Soil water									
	1.ii. Collection of precipitation									
	1.iii. Abstraction from the sea									
Within the economy	<b>2. Use of water received from other economic units</b>									
	<b>3. Total use of water (= 1 + 2)</b>
